Nomikos Strigkos

Senior Full-stack Developer / Project leader

History & Introduction

Entering the third decade of my professional life, I assess the potential of A.I. and Tools with both optimism and critical thinking. I am developing a new way of working that enables the parallel management of multiple projects, leading to more effective use of working hours both for myself and for the team members I supervise.

Over the last decade, I have worked mainly as a Backend Software Engineer, while also taking on full-stack development responsibilities for several significant employers. During this period, I have had the opportunity to contribute to major and interesting projects, expand my experience, and build a strong personal portfolio. I have worked with various frameworks and content management systems, with WordPress and Laravel remaining my preferred choices for development.

During the early years of my professional career, I spent a decade in the Banking Sector with the NBG Group. At the same time, I was also active as a freelancer, contributing to a wide range of web-based projects, mainly as a full-stack developer. During that period, I also worked as a Digital Marketing consultant and SEO expert, while delivering seminars on Internet Marketing.
